

AJI - ATC Training Applications

Logo	Application Name	Platform	Description
	Basic Vectoring Currently not installing	iOS	A training application that teaches air traffic controllers the basic concepts of vectoring, phraseology, turn radius, and compass orientations.
	Advanced Vectoring Currently not installing	iOS	Advanced vectoring training application that teaches users to control aircraft around obstacles, while using advanced vectoring concepts, phraseology, turn radius, and compass orientations.
	STARS Keyboard Not working - no ETR	iOS	The STARS app familiarizes students with STARS keyboard functions, the Terminal Controller Workstation (TCW), and the TCW Display Control Bar (DCB).
	ERAM Keyboard Not working - no ETR	iOS	Training application for users to practice ERAM keyboard functions and entries needed for proficiency on the ERAM system.
	TowerPro Not working - no ETR	iOS	This app is specifically designed for CPC-ITs that transfer to Miami Tower. Users with previous experience or curious about large complex tower operations are welcome to practice with this app. The app focuses on Stage 4 (ground control) and Stage 5 (local control) qualification training, with customizable simulations scenarios for ground and local control and special control operations. The app features interactive weather, out-of-the-window views, in-app progression and reward system.

Logo	Application Name	Platform	Description
	ATCGO - TRACON Not working - no ETR	iOS	The TRACON training application teaches headings, altitudes and speeds by introducing multiple aircraft with different characteristics moving at different altitudes. The objective is to match altitudes and intercept the targets at the correct headings while avoiding other aircraft.
	ATCGO - En Route Not working - no ETR	iOS	The En Route training application teaches how to set headings, holds, sequencing, altitudes and speeds relevant to En Route activities. The application reinforces scanning and situational awareness by challenging users to react to situations and apply appropriate responses.
	ATCGO - Tower Not working - no ETR	iOS	The Tower training application assists with developing scanning and situational awareness skills. Users practice how to manage traffic flow by sequencing aircraft and learning to identify and resolve conflicts.
	ATCGO Pro - TRACON Not working - no ETR	iOS	The ATCGO Pro – TRACON training application provides ATC simulation training. Users practice ATC skills in more complex FAA radar approach control (TRACON) airspace and work through micro-tasking scenarios focused on individual skills to prepare for the SIM mode scenarios. This application provides opportunities to practice scanning, situational awareness, aircraft separation, vectoring, speed control, sequencing aircraft, maintaining positive control, and conflict resolution.
	ATCGO Pro – En Route Not working - no ETR	iOS	The ATCGO Pro – En Route training application provides ATC simulation training. Users practice ATC skills in more complex En Route airspace and work through micro-tasking scenarios focused on individual skills to prepare for the SIM mode scenarios. This application provides opportunities to practice scanning, situational awareness, aircraft separation, vectoring, speed control, sequencing aircraft, maintaining positive control, and conflict resolution.
